

PAYLOAD AND SERVICE LIFE

Hardox cuts down on weight and extends the service life of steel structures in comparison with regular steel. A lighter truck container made of Hardox means an increased load capacity of 10–20% and even more in some applications. Not only does it reduce the number of trucks on our roads, it also saves fuel and reduces emissions. Whatever the application, Hardox contributes to a stronger, lighter and more sustainable world. And when the product reaches its final expiration date, 100% of it can be recycled into new strong and energy-saving products.

The extreme wear resistance has always been key to the success of Hardox. Today it is harder and tougher than ever, and able to withstand heavy impact without permanent deformation or cracking.

Originally intended as a wear plate, it turned out that the unique combination of hardness and toughness allows Hardox to perform as a load-carrying part in many applications. With Hardox, you can design structures that are wear-resistant, strong and lightweight at the same time. Today, Hardox has come a long way from its early years. It comes in a much wider range, and the traditional Hardox wear plate is also available as wear-resistant tubes.

If you are a cost-sensitive and performance-oriented steel user, Hardox is all good news! Visit hardox.com for more information about how hard and tough turns into payload and service life.

HARDNESS AND TOUGHNESS WORKING TOGETHER

Hardness is what gives Hardox its unique wear resistance and structural strength. Hardness minimizes wear since it is difficult for the 'edges' of abrasive material to cut into the material. Hardox delivers the same wear resistance during the plate's entire service life, since it remains equally hard throughout. Hardness also means it has excellent yield and tensile strength, properties that keep a structure in shape without being deformed.

Toughness is the other strong point of Hardox. When hardness makes it wear resistant and strong, toughness is what makes it possible for Hardox to be bent, formed and welded without cracking. If a Hardox wear plate is stressed beyond its yield point and plastically deformed—on purpose in the workshop or when hit by a heavy rock on site—it will resist cracking and if a localized crack should occur it will resist propagation.

HARDOX AT THE BLINK OF AN EYE

It only takes a fraction of a second to discover the unique performance of Hardox. The impact force from large and heavy objects is distributed over the plate, resisting dents and cracking.

The metal absorbs the energy and returns to its original shape in the same way as when a tennis racket hits a ball.

DESIGN AND APPLICATION EXPERTISE

Whatever your application, SSAB will support you in selecting the right Hardox quality for optimal performance and service life. We are happy to be your material expert partner when developing new and improved applications. Using the WearCalc 2.0 software you can predict the wear for all types of Hardox wear plate. Relative service life is calculated based on the wear plate hardness, the wear conditions and the type of abrasive material impacting on the surface. To access WearCalc 2.0, contact your SSAB representative.

CACL MARA

1.2 200

You will gain a lot by thinking about Hardox as more than a wear plate. If you are wondering why and how, then here is the explanation.

Why? Because the combination of hardness and toughness allows for new innovative ways of designing steel structures and components. Your products will perform better and last longer—giving your business an extra edge. And who doesn't want that.

How? By thinking differently. Which is usually easier said than done. Changing the way steel structures are made involves a new way of thinking for the people in design, production and sales.

To make change easier, you have access to all the support you need. SSAB has now been a world-leading supplier of wear steel for more than 40 years. Our dedication in this area provides unparalleled power to drive the research and development of wear solutions.

Our materials and design experts at SSAB work closely with customers to create new and smarter ways of using Hardox. Challenge them with your applications and you will be greatly rewarded.

A TOUGH WEAR PLATE MADE FOR INNOVATIONS

SURPRISINGLY FLEXIBLE

We never get tired of talking about Hardox being both hard and tough! It opens up so many possibilities for creative engineers to design wear-resistant, strong and light products that utilize Hardox wear resistance as well as its potential to perform as a structural steel. Our most popular Hardox grades even come with a guaranteed minimum toughness value, making them particularly designer-friendly.

5-15-15-1-5-1

STRENGTH, HARDNESS AND GUARANTEED TOUGHNESS

The toughness values for Hardox HiTuf, 450 and 500 are guaranteed minimum values at -40°C, -20°C and 0°C respectively. Compared to a standard S355 steel, Hardox HiTuf for example has about three times higher resistance to permanent deformation (hardness) and an equal resistance to cracking (toughness).

FIGHTING WEAR AND WEIGHT

What hardness is right for you? Probably a combination of grades, fighting different wear conditions. A tipper body might have one Hardox grade in the base and another on the sides in order to provide even service life for the entire body. When calculating relative service life with WearCalc 2.0 as shown in the illustration, Hardox Extreme will last 12 times longer than mild steel in similar wear conditions.

		HARDNESS CO	OMPARISON OF	SOME HARDOX GI	RADES*

AT YOUR SERVICE 24/7

Local availability on a global scale, a fast track supply chain and personal commitment are key factors in our efforts to satisfy our customers.

Quick access to Hardox on your local market means you don't have to make space and tie up capital in an unnecessarily large stock. The most common Hardox grades and dimensions can reach you within 48 hours, directly from an SSAB mill or from local SSAB stock. Hardox has sales and technical support in 45 countries. Experienced engineers—speaking your local language or English—are on call around the clock, ready to answer your questions and take care of any urgent Hardox needs. Find your local contact at hardox.com

HARDOX FROM 0.7 TO 160 MM Its variety of dimensions makes Hardox suitable for a wide range of designs and products.

The outstanding qualities of Hardox wear plate are also available in the form of Hardox Tube 500. This provides extended service life when pumping abrasive materials such as wet concrete, soil, gravel and ore slurry.

All Hardox products are clearly marked. A unique identification number is stamped on the plates for traceability. Other data such as plate dimensions, serial number of the plate and heat number is printed on each plate before delivery.

Knowing your product's unique identity makes workshop processing and quality control so much easier. The identifying marks also come in handy when storing smaller pieces of Hardox for later use.

UNDERGROUND MINING

Hardox wear plate is a reliable and flexible solution for underground mining operations. Its outstanding weldability and workshop-friendly properties make it easy to perform on-site repairs, often inside the mine without having to bring the equipment to the surface. This keeps production up and maintenance costs down.

RECYCLING

Recycling processes such as the fragmentizing of waste places enormous demands on equipment. In order to stay productive and competitive it is vital to use materials that withstand the abuse. Hardox wear plate is the solution. Developed specifically for tough demands, Hardox wear plate allows recyclers and recycling equipment manufacturers to cut costs, improve service life, and optimize production.

ROAD BUILDING

Road building needs a variety of equipment, from trucks that transport heavy material long distances to machines that withstand extreme wear when breaking ground. The unique properties of Hardox wear plate take you beyond conventional design thinking. For example, its superior strength allows for thinner plates that lower overall weight and enables increased payloads.

MAKING FRIENDS IN THE WORKSHOP

Extreme consistency is a trademark of Hardox. Whether you are going to weld, bend or machine the material, you can expect Hardox to deliver predictable performance within plates, between plates and over time. That's a good start for making friends in the workshop.

Using Hardox wear plate often lead to questions about production processes, workshop methods and material properties. To ensure your day-to-day operation runs smoothly, you have direct access to our technical support team for advice and troubleshooting in the workshop and on site.

At hardox.com you will find in-depth information about Hardox workshop procedures, covering preheating, welding, cutting, bending and machining.

TECHNICAL SUPPORT

SSAB customers have quick access to handson support and recommendations from local engineers, usually providing assistance in your own language. Our technical support team is backed up by SSAB's worldwide network of sales offices and representatives.

CUTTING EDGE PROPERTIES

FLATNESS

Flatness is good for both production and appearance. Flat plates can easily be welded to each other without problems with the welding gap. And if you are producing equipment with large flat surfaces they look great when painted or used as 'billboards'.

UNIFORM THICKNESS

The narrow tolerances for thickness guarantees your finished structure will be as light as you expect. And when processing the plate even a fraction of a millimeter counts, since bending force and springback are directly related to the thickness. SSAB was first in the world to introduce a precision guarantee on the thickness of heavy plate–AccuRoIITech™.

INTERNALLY RELAXED

Thanks to careful heat treatment during production, Hardox wear plates have uniform internal properties. This means that a plate will stay flat when cut into smaller pieces, whether it's cut cold or hot.

MACHINING

Hardox wear plate is easy to machine. Drilling, countersinking, tapping, turning, and milling are made with high-speed steel tools.

WELDING

Hardox has great weldability to any type of weldable steel. Flatness and narrow thickness tolerances make automatic welding easy, and shorten the time for fit up and tacking.

BENDING

The uniform properties, close thickness tolerances and smooth surface make Hardox well suited to free bending and roll bending.

THE NAKED **TRUTH ABOUT** HARDOX IN MY BODY

BUCKETS

Hardox wear plate has great structural properties for excavator buckets. The buckets last longer, keep their shape and the wear parts will be easy to change.

CONTAINERS

Wood chips one day, demolition rubble the next—a Hardox container handles the toughest of loads and still returns in good shape at the end of the day.

If you want a body that's hard, tough and costefficient, it's a good idea to turn to a Hardox In My Body manufacturer.

They are dedicated to supplying Hardox bodies that will weigh less, perform better, last longer, carry more payloads and give better fuel economy. Hardox In My Body is a trademark sign only used on products from manufacturers certified by SSAB. It's a guarantee that the manufacturer has extensive knowledge of steel production and that the signed product is made with genuine Hardox wear plate. hardoxinmybody.com

The combination of hardness and toughness is what makes Hardox outstanding. It's extremely resistant to wear, and its structural properties allow it to perform as a load-carrying part in many applications.

Hardox In My Body manufacturers have priority access to SSAB's latest expertise in material technology, applications and manufacturing methods, all of which rapidly translate into better products for you as a customer.

TIPPER BODIES

Hardox is perfect for designing low-weight and wear-resistant equipment for quarrying, mining and other applications involving the moving of rocks and earth.

TRUCK BODIES

Hardox allows for a design with a minimum of reinforcing beams. Lower air resistance and more load-carrying capacity give better transport economy.

What do we mean by calling it a 'one-stop wear shop'? Simply that Hardox Wearparts is the place to go for all your wear-related needs.

Companies around the world depend on Hardox Wearparts to keep their operations running smoothly, without costly disturbances or downtime.

As a customer of Hardox Wearparts, you can order new Hardox wear parts based on your drawings and instructions. You can also select from a wide range of other replacement parts for your equipment. And you have access to tried-and-tested services for costsaving pro-active maintenance and repair strategies.

Depending on the situation, using Hardox for your wear parts can increase performance and service life dramatically. Two to three times is standard—even ten times or more has been reported compared with regular steel.

THE MASTERS OF UPTIME

SSAB is a Nordic and US-based steel company. SSAB offers value added products and services developed in close cooperation with its customers to create a stronger, lighter and more sustainable world.

SSAB has employees in over 50 countries. SSAB has production facilities in Sweden, Finland and the US. SSAB is listed on the NASDAQ OMX Nordic Exchange in Stockholm and has a secondary listing on the NASDAQ OMX in Helsinki. www.ssab.com

HARDOX HITUF

General Product Description

The extra-high tough steel for structural wear parts

Hardox[®] HiTuf is an abrasion-resistant plate with guaranteed impact toughness. With a nominal hardness of 350 HBW, it's a good choice for structural wear parts like thick cutting edges, demolition tools and rippers.

Dimension Range

Hardox HiTuf is available in thicknesses of 40 - 160 mm. Hardox HiTuf is available in widths up to 3350 mm and lengths up to 14630 mm. For thicknesses over 125 mm preferred width is 1650 mm. More detailed information on dimensions is provided in the dimension program.

Mechanical Properties

Thickness (mm)	Hardness (HBW) Min - Max ¹⁾	Typical yield strength, not guaranteed (MPa)
40.0- 160.0	310- 370	850

¹⁾ Brinell hardness, HBW, according to EN ISO 6506-1, on a milled surface 0.5 – 3 mm below surface. At least one test specimen per heat and 40 tons. The nominal material thickness will not deviate more than + 15 mm from that of the test specimen.

Hardox is through-hardened. Minimum core hardness is 90 % of the guaranteed minimum surface hardness.

Impact Properties

	Min. Impact energy (J) for transverse tests Charpy V 10x10 mm test specimen ²⁾
Hardox HiTuf	40 J /- 40 C

²⁾ Impact testing according to ISO EN 148 per heat and thickness group. Average of three tests. Single value minimum 70% of specified average.

Tolerances

More details are given in SSAB's brochure 41-General product information Strenx, Hardox, Armox and Toolox-UK and Hardox[®] Guarantees or on www.ssab.com.

Thickness

Tolerances according to Hardox Thickness Guarantees. Hardox[®] Guarantees meets the requirements of EN 10 029 Class A but offers more narrow tolerances.

Length and Width

According to SSAB's dimension program. Tolerances conforms to EN 10 029 or to SSAB's standard after agreement.

Shape

Tolerances according to EN 10 029

Flatness

Tolerances according to Hardox Flatness Guarantee class C, which are more restrictive than EN 10 029 Class N.

Surface Properties

EN 10 163-2 Class A Subclass 1

Delivery Conditions

The delivery condition is Quenched. The plates are delivered with sheared or thermally cut edges. Untrimmed edges after agreement. Delivery requirements can be found in SSAB's brochure 41-General product information Strenx, Hardox, Armox and Toolox-UK or www.ssab.com.

HARDOX HITUF

Fabrication and Other Recommendations

Welding, bending and machining.

Recommendations can be found in our brochures on www.hardox.com or consult Tech Support, techsupport@ssab.com.

Hardox HiTuf is not intend for further heat treatment. It has obtained its mechanical properties by quenching and when necessary by means of subsequent tempering. The properties of the delivery condition cannot be retained after exposure to temperatures in excess of 450°C.

Appropriate health and safety precautions must be taken when welding, cutting, grinding or otherwise working on this product. Grinding, especially of primer coated plates, may produce dust with a high particle concentration.

HARDOX 400 SHEET

General Product Description

The all-around steel that resists wear and abrasion.

Hardox 400 is an abrasion-resistant steel with a nominal hardness of 400 HBW. Hardox 400 is an all-around wear resistant steel. Thanks to its high toughness, good bendability and weldability, this steel can be used in structures with moderate wear.

Dimension Range

Hardox 400 Sheet is available in thicknesses between 2-8 mm. Hardox 400 Sheet is available in widths up to 1860 mm and lengths up to 16000 mm. More detailed information on dimensions is provided in the dimension program.

Mechanical Properties

Thickness	Hardness ¹⁾	Typical yield strength (MPa),
(mm)	(HBW)	not guaranteed
2.00- 8.00	370-430	1100

¹⁾ Brinell hardness, HBW, according to EN ISO 6506-1, on a milled surface 0.5-3 mm below surface. At least one test specimen per heat and 40 tons.

Impact Properties

Grade	Longitudinal test, typical impact energy, Charpy V 10 x10 mm test specimen
Hardox 400 Sheet	45 J /-40 °C

For thicknesses between 6 - 11.9 mm, sub-size Charpy V-specimens are used. The specified toughness is then proportional to the cross-sectional area of the test specimen, compared to a full-size specimen (10 x 10 mm). Average of three tests.

Chemical Composition (heat analysis)

Max CET(CEV)	0.39 (0.52)
Typ CET(CEV)	0.30 (0.48)

$$CET = C + \frac{Mn + Mo}{10} + \frac{Cr + Cu}{20} + \frac{Ni}{40} \qquad CEV = C + \frac{Mn}{6} + \frac{Cr + Mo + V}{5} + \frac{Cu + Ni}{15}$$

Tolerances

Thickness

Tolerances according to Hardox Thickness Guarantees. Hardox[®] Guarantees meet the requirements of ½ EN 10 051 for cut to length sheet.

Length and Width

According to SSAB's dimension program. Tolerances conform to EN 10 051. Tighter tolerances available on request.

Shape

Tolerances according to EN 10 051.

Flatness

For cut to length sheet the tolerances are according to Hardox Flatness Guarantees Class B, that offers narrower tolerances compared to EN 10 051.

Surface Properties

According to EN 10 163-2, Class A Subclass 1.

Bending

Tolerences for Hardox cut to length sheet are according to Hardox Bending Guarantees Class A.

Delivery Conditions

The delivery condition is Q (Quenched). Cut to length sheet are delivered with an as-rolled surface and mill edges as standard delivery condition. Delivery requirements can be found in SSAB's brochure 41-General Product Information Strenx, Hardox, Armox and Toolox-UK or at www.ssab.com.

Fabrication and Other Recommendations

Welding, bending and machining.

Recommendations can be found in SSAB's brochures at www.hardox.com or consult Tech Support, techsupport@ssab.com.

HARDOX 400 SHEET

Hardox 400 is not intended for further heat treatment. It has obtained its mechanical properties by quenching and when necessary by means of subsequent tempering. The properties of the delivery condition cannot be retained after exposure to temperatures in excess of 250°C. Hardox sheets can be welded and thermal cut at room temperature without pre-heating, all common welding and cutting processes can be used.

Appropriate health and safety precautions must be taken when welding, cutting, grinding or otherwise working on this product. Grinding, especially of primer coated plates, may produce dust with a high particle concentration.

HARDOX 450 SHEET

General Product Description

The most popular abrasion-resistant steel with excellent structural properties. Hardox 450 is an abrasion-resistant steel with a nominal bardness of 450 HBW. Hardox 450 combines go

Hardox 450 is an abrasion-resistant steel with a nominal hardness of 450 HBW. Hardox 450 combines good bendability and weldability with an option for guaranteed impact toughness (Hardox 450 Tuf).

The products can be used in many different components and structures that are subject to wear. Hardox 450, with an extra 50 Brinell hardness over our 400 grade, provides better dent and abrasion resistance as well as longer wear life, so you can achieve even greater savings.

Dimension Range

Hardox 450 Sheet is available in thicknesses between 2.5-8 mm. Hardox 450 Sheet is available in widths up to 1775 mm and lengths up to 16000 mm. More detailed information on dimensions is provided in the dimension program.

Mechanical Properties

Thickness	Hardness ¹⁾	Typical yield strength (MPa),
(mm)	(HBW)	not guaranteed
2.50- 8.00	425- 475	1100- 1300

¹⁾ Brinell hardness, HBW, according to EN ISO 6506-1, on a milled surface 0.5 – 3 mm below surface. At least one test specimen per heat and 40 tons.

Impact Properties

Grade	Longitudinal test, typical impact energy, Charpy V 10x10 mm test specimen.	Transverse test, guaranteed impact ener- gy, Charpy V 10x10 mm test specimen.
Hardox 450	50 J/-40 °C	-
Hardox 450 Tuf ¹⁾		Min. 27 J /-20 °C 2)

¹⁾ Impact testing is performed on thicknesses \geq 6 mm. For thicknesses between 6 - 11.9 mm, sub-size Charpy V-specimens are used. The specified minimum value is then proportional to the cross-sectional area of the test specimen, compared to a full-size specimen (10 x 10 mm). Impact testing according to ISO EN 148 per heat and thickness group. Average of three tests.

²⁾ Single value minimum 70% of specified average.

Tolerances

Thickness

Tolerances according to Hardox Thickness Guarantees. Hardox[®] Guarantees meets the requirements of ½ EN 10 051 for cut to length sheet.

Length and Width

According to SSAB's dimension program. Tolerances conform to EN 10 051. Tighter tolerances available on request.

Shape

Tolerances according to EN 10 051.

Flatness

For cut to length sheet the tolerances are according to Hardox Flatness Guarantees Class B, that offers narrower tolerances compared to EN 10 051.

Surface Properties

According to EN 10 163-2, Class A Subclass 1.

Bending

Tolerances for Hardox cut to length sheet are according to Hardox Bending Guarantees Class B. All Classes are closer than the requirements in EN 10 025-6.

HARDOX 450 SHEET

Delivery Conditions

The delivery condition is Q (Quenched). Cut to length sheet are delivered with an as-rolled surface and mill edges as standard delivery condition. Delivery requirements can be found in SSAB's brochure 41-General Product Information Strenx, Hardox, Armox and Toolox-UK or at www.ssab.com.

Fabrication and Other Recommendations

Welding, bending and machining.

Recommendations can be found in SSAB's brochures at www.hardox.com or consult Tech Support, techsupport@ssab.com.

Hardox 450 and Hardox 450 Tuf are not intended for further heat treatment. Mechanical properties are achieved by quenching and when necessary by means of subsequent tempering. The properties of the delivery condition cannot be retained after exposure to temperatures in excess of 250 °C. Hardox sheets can be welded and thermal cut at room temperature without pre-heating, all common welding and cutting processes can be used.

Appropriate health and safety precautions must be taken when welding, cutting, grinding or otherwise working on this product. Grinding, especially of primer coated plates, may produce dust with a high particle concentration.

SSAB

HARDOX 500 SHEET

General Product Description

The bendable, weldable and highly abrasion-resistant steel.

Hardox 500 is a bendable and weldable abrasion-resistant steel, with a nominal hardness of 500 HBW. Suitable for applications that demand higher wear resistance.

Hardox 500 increases payload and increases service life while maintaining good processability and toughness.

Dimension Range

Hardox 500 sheet are available in thicknesses 3.0- 6.5 mm. Hardox 500 Sheet is available in widths up to 1725 mm and lengths up to 16000 mm. More detailed information on dimensions is provided in the dimension program.

Mechanical Properties

Thickness	Hardness ¹⁾	Typical yield strength (MPa),
(mm)	(HBW)	not guaranteed
3.00- 6.50	470- 530	1400

¹⁾ Brinell hardness, HBW, according to EN ISO 6506-1, on a milled surface 0.5 – 3 mm below surface. At least one test specimen per heat and 40 tons.

Impact Properties

	Longitudinal test, typical impact energy, Charpy V 10x10 mm test specimen.
Hardox 500	37 J /-40 °C

For thicknesses between 6 - 11.9 mm, subsize Charpy V-specimens are used. The specified toughness is then proportional to the cross-sectional area of the test specimen, compared to a full-size specimen (10 x 10 mm). Impact testing according to ISO EN 148 per heat and thickness group. Average of three tests.

Chemical Composition (heat analysis)

C ^{*)}	Si ^{*)}	Mn ^{*)}	P	S	Cr ^{*)}	Ni ^{*)}	Mo ^{*)}	B ^{*)}
(max %)	(max %)	(max %)	(max %)	(max %)	(max %)	(max %)	(max %)	(max %)
0.27	0.50	1.60	0.025	0.010	1.20	0.25	0.25	0.005

The steel is grain refined. $\ensuremath{^*}\xspace$ Intentional alloying elements.

Carbon Equivalent CET (CEV)

Thickness (mm)	3.00 - 6.50
Max CET(CEV)	0.46 (0.58)
Typ CET(CEV)	0.40 (0.55)

$$CET = C + \frac{Mn + Mo}{10} + \frac{Cr + Cu}{20} + \frac{Ni}{40} \qquad CEV = C + \frac{Mn}{6} + \frac{Cr + Mo + V}{5} + \frac{Cu + Ni}{15}$$

Tolerances

Thickness

Tolerances according to Hardox Thickness Guarantees. Hardox[®] Guarantees meets the requirements of ½ EN 10 051 for cut to length sheet.

Length and Width

According to SSAB's dimension program. Tolerances conform to EN 10 051. Tighter tolerances available on request.

Shape

Tolerances according to EN 10 051.

Flatness

For cut to length sheet the tolerances are according to Hardox Flatness Guarantees Class B, that offers narrower tolerances compared to EN 10 051.

Surface Properties

According to EN 10 163-2, Class A Subclass 1.

Bending

Tolerances for Hardox cut to length sheet are according to Hardox Bending Guarantees Class C.

Delivery Conditions

The delivery condition is Q (Quenched). Cut to length sheet are delivered with an as-rolled surface and mill edges as standard delivery condition. Delivery requirements can be found in SSAB's brochure 41-General Product Information Strenx, Hardox, Armox and Toolox-UK or at www.ssab.com.

Fabrication and Other Recommendations

Welding, bending and machining.

Recommendations can be found in SSAB's brochures at www.hardox.com or consult Tech Support, techsupport@ssab.com.

HARDOX 500 SHEET

Hardox 500 is not intended for further heat treatment. It has obtained its mechanical properties by quenching. The properties of the delivery condition cannot be retained after exposure to temperatures in excess of 250°C. Hardox sheets can be welded and thermal cut at room temperature without pre-heating, all common welding and cutting processes can be used.

Appropriate health and safety precautions must be taken when welding, cutting, grinding or otherwise working on this product. Grinding, especially of primer coated plates, may produce dust with a high particle concentration.

SSAB

General Product Description

At 550 HBW and with a toughness close to Hardox 500 Hardox[®] 550, with a nominal hardness of 550 HBW and toughness close to Hardox 500, increases wear life but not at the expense of crack integrity.

Dimension Range

Hardox 550 is supplied in plate thickness of 8.0 – 65 mm, up to 2900 mm in width and up to 14630 mm in length. More detailed information on dimensions is provided in the dimension program.

Mechanical Properties

Thickness (mm)	Hardness ¹⁾ (HBW)
8.00- 65.00	525- 575

 $^{1)}$ Brinell hardness, HBW, according to EN ISO 6506-1, on a milled surface 0.5 – 3 mm below surface. At least one test specimen per heat and 40 tons. The nominal material thickness will not deviate more than ± 15 mm from that of the test specimen.

Hardox is through-hardened. Minimum core hardness is 90% of the guaranteed minimum surface hardness.

Impact Properties

Grade	Longitudinal test, Typical Impact energy, Charpy V 10 x10 mm test specimen
Hardox 550	30 J /-40 °C

Chemical Composition

C ^{*)}	Si ^{*)}	Mn ^{*)}	P	S	Cr ^{*)}	Ni ^{*)}	Mo ^{*)}	B ^{*)}

0.37	0.50	1.30	0.020	0.010	1.40	1.40	0.60	0.004

The steel is grain refined. *) Intentional alloying elements.

Carbon Equivalent CET(CEV)

Thickness (mm)	8.00 - 65.00
Max CET(CEV)	0.51 (0.76)
Typ CET(CEV)	0.48 (0.72)

$$CET = C + \frac{Mn + Mo}{10} + \frac{Cr + Cu}{20} + \frac{Ni}{40}$$
 $CEV = C + \frac{Mn}{6} + \frac{Cr + Mo + V}{5} + \frac{Cu + Ni}{15}$

Tolerances

More details are given in SSAB's brochure 41-General product information Strenx, Hardox, Armox and Toolox-UK and Hardox[®] Guarantees or on www.ssab.com.

Thickness

Tolerances according to Hardox Thickness Guarantees. Hardox[®] Guarantees meets the requirements of EN 10 029 Class A but offers more narrow tolerances.

Length and Width

According to SSAB's dimensions program. Tolerances according to SSAB's mill edge standards or tolerances that conform to EN 10 029.

Shape

Tolerance according to EN 10 029.

Flatness

Tolerances according to Hardox Flatness Guarantee class E, which are more restrictive than EN 10 029 Class N.

Surface Properties

EN 10163-2 Class A Subclass 1.

Delivery Conditions

The delivery condition is Q or QT (Quenched or Quenched and Tempered). The plates are delivered with sheared or thermally cut edges. Untrimmed mill edges available by agreement.

Delivery requirements can be found in SSAB's brochure 41-General product information Strenx, Hardox, Armox and Toolox-UK or at

www.ssab.com.

Fabrication and Other Recommendations

Welding, bending and machining.

Recommendations can be found in SSAB's brochures at www.hardox.com or consult Tech Support, techsupport@ssab.com.

Hardox 550 is not intended for further heat treatment. It has obtained its mechanical properties by quenching and when necessary by means of subsequent tempering. The properties of the delivery condition cannot be retained after exposure to temperatures in excess of 250°C.

Appropriate health and safety precautions must be taken when welding, cutting, grinding or otherwise working on this product. Grinding, especially of primer coated plates, may produce dust with a high particle concentration.

The UK English version of this document shall prevail in case of discrepancy. Download the latest version of this document at www.ssab.com Hardox, Strenx, Docol, Dogal, Domex, Toolox, Laser, Armox, Ramor, GreenCoat are trademarks of SSAB Technology AB, Sweden

SSAB

General Product Description

The extra hard and tough steel for extreme wear

At a nominal hardness of 600 HBW, Hardox[®] 600 has a uniquely high impact toughness.

Especially suited for extreme wear conditions, it can still be cut and welded, making it an excellent choice for high-performance applications.

Dimension Range

Hardox 600 is available in thicknesses of 6 - 65 mm. Hardox 600 is available in widths up to 2000 mm and lengths up to 14630 mm. Preferred dimensions are 2000 x 4000 mm, other dimensions on request. More detailed information on dimensions is provided in the dimension program.

Mechanical Properties

Thickness (mm)	Hardness ¹⁾ (HBW)
6.0-51	570- 640
51.1-65	550- 640

¹⁾ Brinell hardness, HBW, according to EN ISO 6506-1, on a milled surface 0.5 - 3 mm below surface. At least one test specimen per heat and 40 tons. The nominal material thickness will not deviate more than \pm 15 mm from that of the test specimen.

The plates are through-hardened to a minimum of 90 % of the guaranteed minimum surface hardness.

The steel is grain refined. *) Intentional alloying elements.

Carbon Equivalent CET(CEV)

Thickness (mm)	6.0 - 24.9	25.0 - 65
Max CET(CEV)	0.58 (0.76)	0.61 (0.87)
$CET = C + \frac{Mn + Mo}{10} + \frac{Cr + Cu}{20} + \frac{Ni}{40}$	$CEV = C + \frac{Mn}{6} + \frac{Cr + Mo + 5}{5}$	$\frac{V}{15}$ + $\frac{Cu + Ni}{15}$

Tolerances

More details are given in SSAB's brochure 41-General product information Strenx, Hardox, Armox and Toolox-UK and Hardox® Guarantees or on www.ssab.com.

Thickness

Tolerances according to Hardox Thickness Guarantees. Hardox[®] Guarantees meets the requirements of EN 10 029 Class A but offers more narrow tolerances.

Length and Width

According to SSAB's dimensions program. Tolerances conforms to EN 10 029 or to SSAB's standard after agreement.

Shape

Tolerance according to EN 10 029.

Flatness

Tolerances according to Hardox Flatness Guarantee class E, which are more restrictive than EN 10 029 Class N.

Surface Properties

According to EN 10163-2 Class A Subclass 1.

Delivery Conditions

The delivery condition is Quenched. The plates are delivered with sheared or thermally cut edges. Untrimmed mill edges available by agreement. Delivery requirements can be found in SSAB's brochure 41-General product information Strenx, Hardox, Armox and Toolox-UK or at www.ssab.com.

Fabrication and Other Recommendations

Welding, bending and machining.

Recommendations can be found in SSAB's brochures on www.hardox.com or consult Tech Support, techsupport@ssab.com.

Hardox 600 is not intended for further heat treatment. It has obtained its mechanical properties by quenching and when necessary by means of subsequent tempering. The properties of the delivery condition cannot be retained after exposure to temperatures in excess of 250ºC.

Appropriate health and safety precautions must be taken when welding, cutting, grinding or otherwise working on this product. Grinding, especially of primer coated plates, may produce dust with a high particle concentration.

The UK English version of this document shall prevail in case of discrepancy. Download the latest version of this document at www.ssab.com Hardox, Strenx, Docol, Dogal, Domex, Toolox, Laser, Armox, Ramor, GreenCoat are trademarks of SSAB Technology AB, Sweden

HARDOX 600

HARDOX EXTREME

General Product Description

Hardox Extreme steel for extreme abrasion resistance

Hardox[®] Extreme is the world's hardest wear plate with a nominal hardness of 60 HRC (Rockwell) and typical hardness of 650-700 HBW.

Hardox Extreme is an abrasion resistant steel with a nominal hardness of 60 HRC, intended for applications with extreme high demands on abrasion resistance. Typical applications is liner plates, etc.

Dimension Range

Hardox Extreme is supplied in plate thickness of 8 - 19 mm, up to 2000 mm in width and up to 14630 mm in length, preferred widths are 2000 x 4000 mm, other width on request. More detailed information on dimensions is provided in the dimension program.

Mechanical Properties

Thickness (mm)	Typical Hardness (HRC)
8.00- 19.00	57-63

Chemical Composition (ladle analysis)

C	Si	Mn	P	S	Cr	Ni	Mo	B
(max %)								
0.47	0.50	1.40	0.015	0.010	1.20	2.50	0.80	0.005

The steel is grain refined.

Typical Welding Equivalent CET(CEV)

Thickness (mm)	10.00	20.00
Typical CET(CEV)	0.54(0.65)	0.54(0.65)

$$CET = C + \frac{Mn + Mo}{10} + \frac{Cr + Cu}{20} + \frac{Ni}{40} \qquad CEV = C + \frac{Mn}{6} + \frac{Cr + Mo + V}{5} + \frac{Cu + Ni}{15}$$

Tolerances

More details are given in SSAB's brochure 41-General product information Strenx, Hardox, Armox and Toolox-UK and Hardox® Guarantees or on www.ssab.com.

Thickness

Tolerances according to Hardox Thickness Guarantees. Hardox[®] Guarantees meets the requirements of EN 10 029 Class A but offers more narrow tolerances.

Length and Width

According to SSAB's dimensions program. Tolerances conforms to EN 10 029 or to SSAB's standard after agreement.

Shape

Tolerance according to EN 10 029.

Flatness

Tolerances according to Hardox Flatness Guarantee class E, which are more restrictive than EN 10 029.

Surface Properties EN 10163-2 Class A Subclass 1

Delivery Conditions

The delivery condition is Q (Quenched). The plates are delivered with sheared or thermally cut edges. Untrimmed edges after agreement. Delivery requirements can be found in SSAB's brochure 41-General product information Strenx, Hardox, Armox and Toolox-UK or at www.ssab.com.

Fabrication and Other Recommendations

Welding, bending and machining.

Recommendations can be found in SSAB's brochures on www.hardox.com or consult Tech Support, techsupport@ssab.com.

Hardox Extreme is not intended for further heat treatment. It has obtained its mechanical properties by quenching and when necessary by means of subsequent tempering. The properties of the delivery condition cannot be retained after exposure to temperatures in excess of 150°C.

Appropriate health and safety precautions must be taken when welding, cutting, grinding or otherwise working on the product. Grinding, especially of primer coated plates, may produce dust with high particle concentration.
