

## FIORETTATURA (ACCIAIO INOX) — ENGINE TURNING (STAINLESS STEEL ANTI-REFLEX FINISH)

Questo particolare effetto decorativo anti-riflesso si ottiene smerigliando la lamiera con dei tamponi rotanti in gomma abrasiva (generalmente  $\varnothing 60$  mm), sfalsati con un passo costante, solitamente a  $60^\circ$  a quadrato.

*This unmistakable anti-reflex decorative effect is obtained by grinding the sheet metal with rotating rubber abrasive pads (usually  $\varnothing 60$  mm), with a constant offset, usually  $60^\circ$ .*
